 IO: 1 or 2  
 Doc.:  
 Date : 31<sup>st</sup> January 2021  
 Origin: PrAFA

Country <b>PRT</b>	Institution <b>PrAFA</b>	Module Description <b>Propulsion Systems</b>	ECTS <b>2</b>
-----------------------	-----------------------------	---	------------------

Service <b>AF</b>	<b>Minimum Qualification for Lecturers</b>		
	Language <b>English</b>	<ul style="list-style-type: none"> <li>• <b>Officers:</b> <ul style="list-style-type: none"> <li>○ English: Common European Framework of Reference for Languages (CEFR) Level B2 or NATO STANAG Level 3.</li> <li>○ Thorough knowledge in Propulsion Systems</li> <li>○ Adequate knowledge in Thermodynamics and heat exchange</li> <li>○ Adequate knowledge in Principles of Flight and Aerodynamics</li> <li>○ Adequate knowledge in Military Aviation</li> </ul> </li> <li>• <b>Civilian Lecturers:</b> <ul style="list-style-type: none"> <li>○ English: Common European Framework of Reference for Languages (CEFR) Level B2 or NATO STANAG Level 3.</li> <li>○ Thorough knowledge in Propulsion Systems</li> <li>○ Adequate knowledge in Thermodynamics and heat exchange</li> <li>○ Adequate knowledge in Principles of Flight and Aerodynamics</li> <li>○ Adequate knowledge in Military Aviation</li> </ul> </li> </ul>	

<p><b>Prerequisites for international participants:</b></p> <ul style="list-style-type: none"> <li>• English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2.</li> <li>• At least 1 year of national (military) higher education.</li> </ul>	<p style="text-align: center;"><b>Goal of the Module</b></p> <ul style="list-style-type: none"> <li>• To broaden the knowledge on Propulsion Systems for Aircraft, especially for Air Breathing Internal Combustion and Gas Turbine Engines</li> <li>• To gain sufficient insight to comprehend the working principles of the engine types mostly used in aviation</li> <li>• To acquire knowledge and understand the thermodynamic principles of air breathing combustion engines</li> <li>• To identify different types of engines, engine components, accessories used in aviation</li> <li>• To engage in a multi-national course where all students are expected to bring their knowledge and contribution to the lectures and teaching sessions</li> </ul>
---	--

<b>Learning outcomes</b>	Know-ledge	<ul style="list-style-type: none"> <li>• To foster the interest of young cadets in the topics of propulsion, fluid dynamics and thermodynamics;</li> <li>• To gain technical knowledge on Internal Combustion engine and Gas Turbine engine mechanical and thermodynamic principles;</li> <li>• To acquire in-depth knowledge on the main factors affecting powerplant design and selection for different types of aircraft;</li> <li>• To understand and identify the main pros and cons on each engine type and configuration, depending on the type of application;</li> </ul>
	Skills	<p>Technical</p> <ul style="list-style-type: none"> <li>• To understand and apprehend the working principles of internal combustion and jet/turbo engines;</li> <li>• To identify different types of engines, engine components and accessories;</li> </ul>

<b>Verification of Learning Outcomes</b>	
<b>Observation</b>	<ul style="list-style-type: none"> <li>• The lecturer is responsible for the in-class observation of the Learning Outcomes detailed above, especially, on the items related with Knowledge and Skills;</li> <li>• The lecturer should promote excel in-class environment and enough ease and proximity with the students to allow them to participate, ask questions and share experiences;</li> <li>• The lecturer will promote the participation of all students, equally, and assess their interest, responses and dedication;</li> </ul>
<b>Test</b>	<ul style="list-style-type: none"> <li>• A 1-hour exam will be provided at the end of the course. All questions will have a multiple answer decision sheet;</li> </ul>
<b>Assignment</b>	<ul style="list-style-type: none"> <li>• The class will be divided in groups. Each group will be given a topic to develop and present in-class. Presentation should be less than 1 hour in total, for each group.</li> </ul>
<b>Case study</b>	<ul style="list-style-type: none"> <li>• N/A</li> </ul>

Module Details		
Main Topic	Recommended WH	Details
<b>Internal Combustion (IC)</b> Introduction and Thermodynamic Principles	3	<ul style="list-style-type: none"> <li>Introduction to Piston Engines: Thermodynamic notions, Compression Ratio, Otto cycle, Power, Torque, Specific Fuel Consumption;</li> </ul>
<b>IC</b> Engine Lubrication, Cooling and Ignition	2	<ul style="list-style-type: none"> <li>Lubrication system: Brief description, main components (Oil Tank, Suction Filter, The Pressure Pump, The Check Valve, Scavenge Pump, Oil Cooler, Lubrication Monitoring Instruments), , Types and properties of lubricants;</li> <li>Engine cooling system: Brief description, main system types (Liquid and Air Cooling systems),</li> <li>Engine ignition system: Brief description (magneto and dual), main components (capacitor, ground wire, auxiliary starting devices, venting);</li> </ul>
<b>IC Fuel, Mixture, Carburettors, Icing, Fuel Injection</b>	3	<ul style="list-style-type: none"> <li>Air/fuel mixture (actual and stoichiometric), air/fuel excess ratio (<math>\lambda_a</math>).</li> <li>Air/fuel mixture preparation systems: Brief description (Garburator, Injection), main components (Fuel Pumps, manifold valve, air control unit, discharge nozzle), Carburettor icing and relevant actions to be taken, engine slow running and starting, power enrichment, accelerator pump, engine priming</li> <li>Combustion process in Otto engine: Flame kernel, flame propagation rate, combustion rate, type of fuel, ignition timing.</li> <li>Abnormal combustion process: Knocking, detonation its causes and effects, anti-detonation properties, fuel additives, pre-ignition, effect on engine performance characteristics.</li> <li>;</li> <li>.</li> </ul>
<b>IC</b> Performance, Supercharge and propellers	2	<ul style="list-style-type: none"> <li>Engine Performance: Brake power/torque/BSFC vs air density, altitude, engine operation point (load, engine speed)</li> <li>Supercharging systems: Brief description, system types, main components (Centrifugal compressor, wastegate, drive);</li> <li>Propeller analysis: Components and characteristics, fixed pitch, variable pitch, alpha and beta range, CSP, PCU, Synchronizing;</li> </ul>
<b>Gas Turbine Engine (GTE)</b> Introduction, Principles and types of engines	3	<ul style="list-style-type: none"> <li>Introduction to GTE: Joule cycle, Power, Specific Fuel Consumption.</li> <li>Working principles, Main engine types (Turbojet, Turbofan, Turboprop, Turboshaft.) Main engine layouts (single and multispool engines);</li> <li>Gas turbine performance: Thrust/Inlet momentum drag/TSFC vs altitude, airspeed, ambient conditions;</li> </ul>
<b>GTE Inlets and Compressors</b>	3	<ul style="list-style-type: none"> <li>Air Inlets, main performance aspects.</li> <li>Compressor: Brief description, main types (centrifugal, axial flow).</li> </ul>

International Air Force Semester  
 IO: 1 or 2  
 Doc.:

 Origin: PrAFA

		<ul style="list-style-type: none"> <li>Unstable compressor operation mode (stall, surge), and methods to prevent it (variable stator vanes, bleed valves, multispool design)</li> </ul>
<b>GTE</b> Combustion Chambers and Turbine Assembly	3	<ul style="list-style-type: none"> <li>Combustion chamber: Brief description (Primary air, secondary air flows), main types (annular, can-annular, can) and components (fuel drain, airspray, vaporizers).</li> <li>Combustion chamber performance: pressure loss, efficiency;</li> <li>Turbine: brief description, main types (radial, axial flow), main design aspects (blade loading, number of stages, blade materials, blade shape, blade fixing)</li> <li>Turbine performance: temperature profile, and power losses;</li> </ul>
<b>GTE</b> Exhaust and Lubrication	2	<ul style="list-style-type: none"> <li>Exhaust systems: Brief description in case of mixed and unmixed flow engines, main components (nozzle -convergent-divergent-, jet pipe, noise suppression), danger areas in the vicinity of an engine and aircraft with engine on;</li> <li>Lubrication systems: Brief description, main components (oil tank, oil pump, magnetic chip, filters, oils);</li> </ul>
<b>GTE</b> Thrust, Reverse and Gearboxes	1	<ul style="list-style-type: none"> <li>Thrust reversal systems: Brief description, main types (reverse, external, clamshell, bucket, blocker doors);</li> <li>Gearboxes and accessories;</li> </ul>
Revision and extra time for discussions	2	<ul style="list-style-type: none"> <li>Overhaul of the course, with highlight of most important knowledge items</li> <li>Buffer Lecture for discussions, presentations and clarifications on the subjects</li> </ul>
Test	1	<ul style="list-style-type: none"> <li>Module examination</li> </ul>

## List of Abbreviations:

- AF ..... Air Force
- BSFC ..... Brake Specific Fuel Consumption
- CEFR ..... Common European Framework of Reference for Languages
- CSP ..... Constant Speed Propeller
- ECTS ..... European Credit Transfer and Accumulation System
- GTE ..... Gas Turbine Engine
- IC ..... Internal Combustion
- NATO ..... North Atlantic Treaty Organisation
- PCU ..... Power Control Unit
- STANAG ..... Standardization Agreement
- SFC ..... Specific Fuel Consumption
- TSFC ..... Thrust Specific Fuel Consumption
